

Introduction:

Before taking an Agile Product Owner or Business Analyst specialized course, students should have some fundamental agile knowledge that comes from either experience or training. This 4-hour course serves as an introduction and aligns teams on Agile (SCRUM) terminology, lifecycles, and principles. This course is not specific to any one type of role, so anyone who wants knowledge about Agile will benefit.

What You'll Learn:

- Agile basic concepts, guiding principles, and terminology
- How value is delivered in Agile as compared to other approaches
- How to participate on an Agile team – roles and responsibilities
- Agile estimating
- Common meetings throughout the lifecycle
- Managing the backlog

Teaching Topics:

- Agile manifesto
- Waterfall comparisons
- Agile roles - Product Owner, Scrum Master, and others
- New skills for team members
- When value is delivered
- Estimating techniques
- Product Backlog
- Sprint Backlog
- Burndowns
- Retrospectives
